American SF Type DTPB Valve

New disc valve shuts off dust-laden gases effectively

The DTPB valve is specifically designed to isolate equipment handling dust-laden gases, such as electrostatic precipitators, furnaces, boilers, scrubbers and economisers.

It always functions. Reliably and effectively.

Now it's much easier to inspect the plant for overhaul or repair; change over from one production phase to another; start up a furnace or boiler, or run one part-load; operate a bypass system; discharge exhaust gases in emergencies; or isolate parts of an exhaust system.

Features:

- Tight seal. Tapered disc seals firmly against valve seat.
- Articulated linkage for motorized operation of valve disc, so that little power is needed.
- Protection against dust collection and corrosion.
- Adaptability. Can be easily installed in existing ductwork.
- Simple maintenance.
- Standard for gas flows from 17,500 to 175,000 cfm; temperatures to 750°; pressures to 20" w.g.
